

ALI NEJI

Fullstack Developer

Cracow, Poland (open to hybrid or on-site) | +48 501 766 282 | alinj161@gmail.com
alinj166.github.io/myCv | github.com/alinj166

PROFILE

Fullstack developer working with Java and Spring Boot on the backend, Angular and TypeScript on the frontend, and the delivery chain in between — REST APIs, automated tests, Jenkins pipelines and Docker builds. I have shipped in Java, TypeScript, JavaScript, Dart, Python and PHP, so picking up a new language or framework is normal for me rather than a risk. Currently at Cognizant Kraków in a delivery-operations role, working to strict quality standards in a global French, Arabic and English-speaking team, while continuing to build software outside it. MSc in Business IT (WSB Merito, Poland); MSc in Cybersecurity in progress. Fluent English, French and Arabic.

WORK EXPERIENCE

Senior Process Executive

Apr 2025 – Present

Cognizant, Kraków

- Handle client cases from start to finish against strict quality and deadline targets, in a global team working entirely in English.
- Find the root cause of recurring issues, suggest fixes to the process and internal tools, and help new joiners get up to speed.
- Work inside enterprise systems daily — a clear view of how end users experience software and where it slows them down.

Internship Software development

Jan 2023 – Jun 2023

MAS Group - Tunisia

- Built a construction management platform for a production client — Angular frontend, Java/Spring Boot backend REST APIs.
- Designed the domain model and relational schema with Spring Data JPA, exposed through secure, versioned REST APIs.
- Built reusable Angular components, shared services and RxJS data flows, improving maintainability and speeding up feature delivery.
- Collaborated in Agile sprints — sprint planning, effort estimation, client demonstrations and feature delivery.
- Contributed to the mobile application in Flutter, extending key platform features to Android and iOS.

Full Stack Developer Internship

Dec 2021 – Mar 2022

Rutilea - Tunisia

- Worked full-stack in TypeScript — REST endpoints in Node.js through to the Angular screens that consumed them.
- Took features from ticket to merge — implementation, tests, peer review and handover notes — following the team's agreed coding standards.
- Collaborated in a distributed English, French and Arabic speaking team on a Git branch-and-pull-request workflow, reviewing others' code as well as writing my own.

TECHNICAL SKILLS

Frontend & mobile: Angular, RxJS, TypeScript, React, Flutter

Backend: Java, Spring Boot, Node.js, Express.js, REST API and SOAP design

Languages: Java, TypeScript, JavaScript, Dart, Python, PHP, PowerShell

Databases: PostgreSQL, SQLite, MongoDB, Firebase — relational modelling and NoSQL

CI/CD & Ops: Jenkins, Docker, Git, automated test design, regression testing

Ways of working: Agile / Scrum, code review, effort estimation, mentoring, stakeholder communication

Spoken languages: English & French (Advanced) · Arabic (Fluent) · German (Basic)

SELECTED PROJECTS

Full-stack Developer — First One

Nov 2023 – Apr 2024

Transaction platform with real-time updates and secure payment processing over SOAP — enterprise integration where message contracts and error handling shaped the design.

Web Developer — [Drap.tn](#)

Jul – Nov 2023

Production brand site for custom-made shirts — JWT authentication, encrypted data handling and a Jest unit test suite.

Full-stack Developer — Studentors

May – Sep 2022

Cross-platform educational mentoring app — one shared backend and secure data layer serving both web and mobile.

EDUCATION

MSc, Cybersecurity — ISI, Tunisia

In progress

MSc, Information Technology in Business — WSB Merito University, Poland

2024 – 2026

BSc, Information Technology — Higher Institute of Technological Studies, Tunisia

2020 – 2023

CERTIFICATIONS

DevNet Associate, Cisco Networking Academy (2024) · **ISET Innovation Awards “2IA”**, selected for project innovation (2021)
